

# Battery Saver

**PRODUCT DESCRIPTION:**

JAX Battery Saver breaks down corrosion and rust on cables, terminals and battery surfaces for complete maintenance of all batteries. This product provides 2-stage protection. First, it penetrates dirt and corrosion which can hinder performance. Second, it seals the battery to prevent new or further corrosion.

**PRODUCT BENEFITS:**

- Restores appearance
- Eliminates corrosion
- Protects against drying out
- Perfect for batteries going into storage

**APPLICATION:**

JAX Battery Saver is designed as a two-stage product. When first sprayed on corroded terminals, posts and connectors, the solvent structure aids in loosening and dissolving the undesirable build-up. After allowing up to a minute for the bubbling action to work, a stiff brush can be used to complete the process of removing the corrosion. Wipe clean with a rag, and then clean up the posts and connectors. After reconnecting the battery, give a second application of Battery Saver to cover the connections and cables and surface area around the terminals to totally eliminate any chance of future corrosion.

JAX Battery Saver is ideal for seasonal equipment and any battery that is going to be in storage. Coating the entire top surface will actually help retain a charge. Make sure the water is full prior to storage.

**TECHNICAL DATA:**

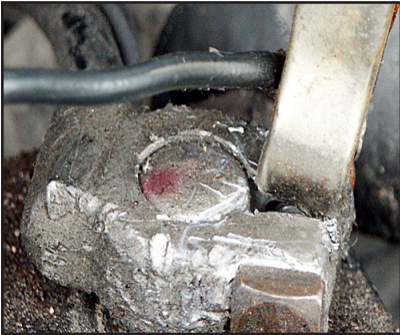

Propellant:	Propane and n-Butane
Flash Point:	430°F Grease, typical
Pour Point:	10° F Grease, typical
Spray Pattern:	Narrow Stream
Viscosity:	N/A
Texture:	Thick Oil with Fine MoS <sub>2</sub> Particulate
Appearance:	Gray
Consistency:	Light
Specific Gravity:	0.886 for Concentrate, typical

**AEROSOL PACKAGING:**

11 oz. net weight aerosol cans (12/case) – Part # JAX103

# Battery Saver
